Assignment 4: Distributed Hash Table & Chord Protocol
Subject: Computer Networks & Distributed Systems
Course Code: CS402
Deadline: 2026-11-05 23:59

Instructions:
1. Implement a distributed hash table using the Chord lookup protocol.
2. Ensure stabilization runs periodically to update successor and finger tables.
3. Handle concurrent node joins and node departures without data loss.

Deliverables:
- Source code in Python or Go with unit test cases.
- Performance analysis graph plotting lookup latency vs node count.
- PDF design document explaining virtual nodes and replication.
